                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2865, Application US/10027632
Sequence 2865, Application US/10027632
Publication No. US20030204075A9
GENERAL INFORMATION
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108027.129
CURRENT APPLICATION NUMBER: US/10/027,632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

Sequence 56205, Application US/10027632

Publication No. US20030204075A9

GENERAL INFORMATION:

ITTLE OF INVENTION: Identification and Mapping of Single Nucleotide

ITTLE OP INVENTION: Delymorphisms in the Human Genome

FILE REFERENCE: 10827.129

CURRENT APPLICATION NUMBER: US/10/027,632

CURRENT FILING DATE: 2002-04.30

FRIOR APPLICATION NUMBER: US 60/18,006

FRIOR APPLICATION NUMBER: US 60/198,676

Sequence 322023, Application US/10027632

Publication No. US2020198371A1

GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identification and Mapping of Single Nucleotide

TITLE OF INVENTION: Polymorphisms in the Human Genome

FILE REPERENCE: 108927.129

CURRENT APPLICATION NUMBER: US/10/027,632

CURRENT PILING DATE: 2002-04-30

PRIOR APPLICATION NUMBER: US 60/218,006

PRIOR APPLICATION NUMBER: US 60/198,676

PRIOR APPLICATION NUMBER: US 60/193,483

PRIOR PILING DATE: 2000-03-29

PRIOR PLING DATE: 2000-03-29

GENERAL INFORMATION

APPLICANT: Murphy, Evelyn

APPLICANT: Conneely, Orla

APPLICANT: Etzgerald, Orlave

TITLE OF INVENTION: Therapeutic Approaches to Diseases by Suppressi

TITLE OF INVENTION: Subfamily of Nuclear Transcription Factors

TITLE OF INVENTION: Subfamily of Nuclear Transcription Factors

FILE REFRENCE: P01972US1

CURRENT APPLICATION NUMBER: US/09/853,386

CURRENT FILING DATE: 2001-05-11

PRIOR APPLICATION NUMBER: US 60/203645

PRIOR FILING DATE: 2000-05-12

NUMBER OF SEQ ID NOS: 153

US-09-940-016-122387/c

i Sequence 122387, Application US/09949016

is Patent No. 6812339

i GENERAL INFORMATION:

i APPLICANT: VENTER, J. Craig et al.

i TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

i TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

if ILE REPRENCE: CL001307

i CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR PLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SSOCTHARE: FaetSEQ for Windows Version 4.0

i LENGTH: 601

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-949-016-1812

| Sequence 1812, Application US/09949016
| Sequence 1812, Application US/09949016
| Patent No. 6812339
| GENERAL INFORMATION:
| TYPLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| FILE REFERENCE: CLOOJ.307
| FILE REFERENCE: 2000-10-20
| PRIOR APPLICATION NUMBER: 60/241,755
| PRIOR PELLING DATE: 2000-10-20
| PRIOR PELLING DATE: 2000-10-20

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: WOLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A

PRIOR FILING DATE: 1998-02-13
PRIOR PELICATION NUMBER: US 60/094,409
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 4406

LENGTH: 951
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 38

US-09-949-016-2642

i Sequence 2642, Application US/09949016

patent No. 6812339

i GENERAL INFORMATION:
TITLE OF INVENTION: DOLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

PILE REPRENCE: CLO01307

CURRENT PAPLICATION NUMBER: US/09/949,016

CURRENT PAPLICATION NUMBER: 60/241,755

PRIOR PRIOR PAPLICATION NUMBER: 60/241,755

PRIOR PRIOR PAPLICATION NUMBER: 60/231,498

PRIOR PRIOR TILING DATE: 2000-10-03

PRIOR PRIOR PRIOR TO NUMBER: 60/231,498

PRIOR PRIOR PRIOR TO NUMBER: 60/231,498

PRIOR PRIOR PRIOR TO NUMBER: 60/231,498

SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NOS: 207012

TYPE: NNA

TYPE: DNA ORGANISM: Human
